

Aveya offers special IVF treatments which involves very low level of medication and injections.

SERVICES OFFERED

NATURAL IVF - Natural cycle IVF is done without the use of fertility drugs and uses the one egg released during the normal monthly cycle. Due to a natural selection process inside the body, the best oocyte is always selected for ovulation and therefore, the chances of pregnancy are high.

Benefits of this patient friendly "Organic IVF" are :

- Less medication
- Low costs
- No risk of hyper stimulation
- Oocyte to live birth rate higher than in conventional IVF
- Preserves body's natural hormone system

MINIMAL STIMULATION IVF - With minimal IVF, low doses of oral medication and injectable hormones are used to obtain a small number of eggs and avoiding hyperstimulation. This is beneficial for those women who do not produce large numbers of eggs on higher doses and women with poor egg quality reserve.

Benefits of Minimal IVF Are :

- Less medication
- Low costs
- Less Time Commitment
- Preserves body's natural hormone system

CONVENTIONAL IVF - This IVF involved surgically retrieving eggs from the ovary and coupling them with sperm in the laboratory to create embryos. After a 3-5 days of growth, the embryos are then transferred into the uterus for implantation.

TREATMENT OF PATIENTS WITH LOW OVARIAN RESERVE

We treat you when Egg Donation is the only option left.

Our specially designed customised stimulation protocols are being made available for the very first time in India by Aveya. Patients who have failed IVF treatments in other clinics can have new hope that they will be successful with our specialised treatment approaches.

WELCOME TO THE WORLD OF AVEYA FERTILITY
